

Quality Bakery Products, Inc

Enhanced Product Protection with Yellow Pails

A Packaging Upgrade Designed for Quality, Consistency, and Reliability

At Quality Bakery Products, our commitment to quality extends beyond the products we manufacture. It also includes the packaging used to protect those products throughout handling, storage, and distribution.

As part of our continuous improvement efforts, QBP is transitioning select bakery solutions to durable yellow HDPE pails. This packaging upgrade provides a stronger, more recognizable presentation while supporting the product protection required by commercial bakeries, food manufacturers, distributors, and foodservice operations.

Why the New Yellow Pails?

Packaging plays an important role in helping preserve product integrity from our facility to the customer's operation. Our yellow pails are designed to provide dependable protection under normal commercial handling and storage conditions.

The opaque yellow construction also limits direct visibility into the container, providing an additional packaging barrier compared with transparent or translucent packaging.

Key Packaging Benefits

- **Durable HDPE Construction:** The pails are manufactured from high-density polyethylene, commonly known as HDPE. This material is widely used for commercial food packaging because of its strength, durability, and resistance to impact during normal handling.
- **Opaque Yellow Design:** The solid yellow color creates an opaque exterior that helps limit direct light exposure while providing a clean, professional, and easily recognizable QBP presentation.
- **Improved Product Identification:** The distinctive yellow packaging makes QBP products easier to identify in warehouses, production areas, coolers, and storage facilities.
- **Designed for Commercial Operations:** The pails are intended to support the handling, stacking, storage, and transportation requirements of professional bakery and food-manufacturing environments.
- **Consistent QBP Brand Presentation:** The updated packaging creates a more unified appearance across participating QBP product categories and strengthens brand recognition throughout the supply chain.

Quality Bakery Products, Inc

The Same Trusted QBP Products

The transition to yellow pails represents a packaging update. It does not indicate a change to the product formulation, performance, application, or quality standards unless QBP communicates a separate product update.

Customers can continue to expect the dependable bakery solutions and consistent performance associated with Quality Bakery Products.

Proper Storage and Handling

The new packaging does not replace the storage and handling requirements established for each product. Customers should continue following the instructions provided on the product label, specification sheet, and other official QBP documentation.

Always keep the container securely closed and store the product within its approved temperature range. Avoid unnecessary exposure to direct sunlight, excessive heat, moisture, or other conditions outside the recommended storage environment.

Questions About Our Packaging Transition?

QBP will continue introducing yellow pails across select product categories as part of this packaging transition.

For questions about affected products, packaging specifications, product availability, or storage requirements, please contact your Quality Bakery Products representative.
